AS-IS Architecture

The Problem

To Be Architecture

> OSS : Scikit- Learn

> The Solution

01 Automated PHI Sanitization

02 ML-Assisted Triage

03 Smart Operational Filtering

SWOT Analysis

Strength

- Directly supports text classification and prediction, aligning with the ticket categorization problem.
- Low implementation complexity compared to full healthcare platforms.
- Minimal infrastructure requirements (runs in standard Python environments).
- Supports interpretable models, improving explainability.

Weakness

- Narrow scope, focused only on ML, not full healthcare workflow systems.
- Requires custom development for domain-specific healthcare workflows.
- Does not provide built-in healthcare data standards (FHIR/EHR) support.

Opportunity

- Can integrate with existing healthcare systems or APIs.
- Enables development of custom ML models tailored to incident ticket classification.
- Opportunity to expand into more advanced ML pipelines (NLP, predictive analytics).
- Large community support and ecosystem in Python ML.

Threat

- Healthcare-specific platforms like Medplum may offer better native integration with healthcare standards.
- EHR systems like OpenEMR may already handle operational workflows.
- Regulatory requirements (HIPAA, PHI handling) may require additional compliance layers.

> The Persona Impact Trio

- David Lee (Compliance Guardian): 5 User Stories | Goal: 100% PHI-Safe Pipeline (Reduced PHI risks).
- Alex Johnson (Tier 1 Operator): 5 User Stories | Goal: 30% Triage Time Reduction (The Efficiency Engine).
- Jordan Miller (Field Tech): 3 User Stories | Goal: 30% Fewer Unnecessary Onsite Trips (The Resource Optimizer).
- 13 Core User Stories.
- 70 Total Story Points.
- WSJF
- Scrum governance with XP technical quality

> Product Road Map

HP Labs Innovation Approach

- SmartHealth follows a research-to-product transition model inspired by the HP Labs approach.
- Machine learning capabilities are initially developed by the research team and then operationalized by product and engineering teams.
- This ensures validated technology, production reliability, and scalable deployment in healthcare environments.
- Dedicated research engineers collaborate with product and DevOps teams to transition the model into production.

BURNUP CHART

KEY METRICS

Projected Monthly Cash Flow

Initial Investment **\$92,000**

Annual Benefits **\$208,320**

ROI **126%**

Payback **9.5 Months**

> Operational Impact

- 33% reduction in triage time
- 1,333 hours recaptured annually
- 40–60% faster escalation of critical incidents
- 50% fewer SLA breaches

Our development and integration phase takes approximately four months, followed by a short adoption period. From the moment the system becomes operational, the investment is recovered within about 9.5 months.

Total time from project start: ~14 months

THANK YOU!

ROI BREAKDOWN - BACK UP SLIDE

Investment Breakdown

Initial investment - one time

Category	High-Level Purpose	Strategic Value	Cost
Change Enablement	MLOps Operationalization	Standardizing how our 8 core tech-ops staff deploy, monitor, and manage ML models in production	\$10,000
Engineering Integration	System Connectivity	Integrating the AI triage engine with Salesforce Service Cloud and ticket workflows	\$15,000
Compliance Setup	PHI Security Validation	Implementing automated PHI redaction and security compliance validation	\$10,000

Annual Operational cost

Compliance Oversight	Continuous Auditing	Quarterly audits to ensure the MLOps pipeline remains HIPAA-compliant.	\$30,000
Model Maintenance	Pipeline Calibration	Retraining and "tuning" the model to prevent drift as medical data evolves.	\$9,000
Tech Infrastructure	The Engine Room	Cloud compute for 40k tickets and 24/7 monitoring of the ML pipeline.	\$18,000
TOTAL			\$92,000

Annual Operational Benefits

Category	Before	After	Financial Impact
1) Triage Labor Savings	6 mins/ticket spent on manual "mail sorting."	4 mins/ticket; AI handles the heavy lifting.	1,333 hours saved (\$53,320 productivity value)
2) Capacity Expansion	Hiring needed to handle more volume.	Current team handles 20,000 extra tickets .	\$100,000 (New Revenue)
3) Quality & SLA	Human errors lead to fines and senior staff rework.	50% fewer SLA fines; 40% less rework.	\$28,000 (Penalty/Labor Savings)
4) Travel Avoidance	Wasted onsite trips for remote-fixable issues.	30% reduction in unnecessary dispatches.	\$27,000 (Transport Savings)
TOTAL ANNUAL BENEFIT			\$208,320
